

A Decade of Facade Access Excellence with the Iconic “Big Blues”

Journal Squared in Jersey City, New Jersey, is an architectural icon, with its three towers equipped with “Big Blues” BMUs, named for their custom blue color that harmonizes with the Towers’ facade. Facade Access Solutions™ North American Team led every phase of the project, from design to long-term servicing, offering streamlined, customer-focused support through the dual expertise of CoxGomyl and Manntech.

Project Highlights:

- **Brand complementarity:** By integrating CoxGomyl and Manntech’s expertise, we provided a cohesive solution across the towers. This partnership enabled the customization of “Big Blues” BMUs to meet each building’s unique access needs, demonstrating our flexibility and client commitment.
- **Setbacks and Terraces:** Journal Squared’s terraces required BMUs with extended outreach. The “Big Blues” were optimized for maximum reach, allowing complete access to complex facade areas. Tower 2’s BMU includes a three-layer cradle, where the top and bottom layers counterbalance for added efficiency and safety.
- **Rapid Installation:** Installation of Tower 3’s “Big Blue” was completed in just two days in March 2023, reflecting our commitment to efficiency and minimal disruption.

Project Timeline and Service Commitment:

July 2014	Design services
February 2016	Tower 1 Installation
December 2019	Tower 2 Installation
March 2023	Tower 3 Installation
March 2023 onwards	Maintenance & Service

Beginning in July 2014, Facade Access Solutions managed every phase, from design through manufacturing, installation, and commissioning. Our long-standing involvement has provided Journal Squared with consistent, high-quality service and peace of mind.

Facade Access Solutions has been selected to provide service for all three BMUs, ensuring each tower continues to receive expert maintenance and servicing.

Since 2014, Facade Access Solutions has delivered consistent, high-quality service, ensuring the “Big Blues” continue to meet Journal Squared’s unique access needs while enhancing the skyline with a design as striking as it is functional.
